

Know what your AI costs and what it delivers

A review of the AI systems we agree are in scope, with savings verified after changes.

I map what you pay for each AI system and what it gives you in return, then recommend what to keep, fix, scale or stop. After your teams approve and make the changes, I check the results against the agreed baseline.

€300,000

in cloud savings reported by a client within six months

THE PORTFOLIO VIEW

AI SYSTEM	PER MONTH	WHAT IT DELIVERS	PER UNIT	ACTION
Customer service assistant	€18,000	42,000 resolved inquiries	€0.43	Scale
Contract summarization pilot	€6,500	900 contracts reviewed	€7.22	Fix
Overlapping assistant licenses	€9,000	Low, duplicated use	n/a	Stop

Illustrative example. Costs cover AI software and licenses, models and APIs, cloud and infrastructure, and data services.

How the review works

01 Agree scope and terms

Agree the systems, access, cost baseline, existing initiatives and fees before the review starts.

02 Map cost and value

Use read-only access to billing, usage and configuration to see what each system costs and how it is used.

03 Recommend what to change

For each system: keep, fix, scale or stop, with the reason, the estimated saving and any effect on service. Your teams decide and implement.

04 Verify the result

Compare costs after each change against similar usage and service quality. Verified savings are reported separately from estimates.

FEES

Defined before the review starts

An assessment fee will be agreed upfront. A savings-linked fee may apply to verified net savings over an agreed period.

The baseline, how savings are attributed, exclusions, implementation costs and reporting will be defined in the engagement terms.

What you receive

A portfolio view of your in-scope AI systems showing cost, value and cost per unit; recommendations to keep, fix, scale or stop; an action tracker; and savings reports once changes take effect.

Savings depend on the systems reviewed, the data available and the changes made. Estimates are never presented as realized savings.

Discuss your AI portfolio

Start with a short conversation about your AI systems, their costs and the data available.
